AI-DRIVEN ANALYTICS & AUTOMATION

Using Artificial Intelligence (AI) and Machine Learning (ML) techniques, our Chief Data Officer and Data Science Engineers work with the enterprise stakeholders as they tackle data management, integration, dissemination, warehousing, and governance to manage the complexity of critical mission data for actionable insights and decision making.

ENTERPRISE DATA MANAGEMENT & GOVERNANCE

GAMA-1 is highly experienced in bringing a full range of system planning, design, development, testing, operations and maintenance, troubleshooting, and security vulnerability management. Our engineers, administrators, and technicians use this experience in implementing mission-enabled enterprise-wide systems for our federal government clients.

ADAPTIVE CYBERSECURITY

We provide platform-agnostic security solutions to protect organizations from cyber threats, with experience in supporting Security Operation Centers for real-time threat detection and incident response. We establish zero-trust data governance processes that secure data from theft, corruption, and unauthorized access while ensuring its accessibility to authorized users.

CLOUD & INFRASTRUCTURE MODERNIZATION

Our team collaborates with Federal customers to deliver cloud strategy and migration development using cloud-native solutions, application design and development, DevOps, information security, and smooth transitions to the cloud. Our excelerated methodology follows proven best practices, software development, and security processes.

"As a trusted federal partner, we are proud to be mission-ready for government transformation, delivering secure cloud solutions, AI-powered automation, enterprise data governance, and adaptive cybersecurity and compliance frameworks to help our clients modernize, reduce inefficiencies, and achieve lasting results.

Our strength lies not only in what we deliver—but in how we deliver it. For four consecutive years, GAMA-1 has been certified as a Great Place to Work, a testament to our culture of collaboration, trust, and purpose. We believe empowered people create exceptional outcomes—for our clients, our teams, and the citizens they serve.

We look forward to being your partner in progress.

– Gustavo Gamarra, President

DIGITAL TRANSFORMATION & MISSION ENABLEMENT

Our team empowers federal agencies to accelerate mission outcomes through Digital Transformation and Mission Enablement services that blend innovation with security and agility. We re-engineer legacy systems using DevSecOps practices, low-code platforms, and cloud-native architectures to modernize core capabilities at scale. Our solutions streamline delivery pipelines, reduce technical debt, and promote continuous integration, enabling rapid deployment of secure, compliant digital services. From NOAA to NASA, our expertise fuels high-impact modernization that enhances operational resilience, mission responsiveness, and citizen-facing service delivery.

GAMA-1 Technologies — where innovation, integrity, and impact drive everything we do.
